VISN 21 in FY2021:
SAFETY
INNOVATION
QUALITY CARE
FOR OUR VETERANS

VA SIERRA PACIFIC NETWORK (VISN 21)
On June 6, 1944, Onofrio “No-No” Zicari stormed Omaha Beach in one of the deadliest battles of World War II: D-Day. The 21-year-old New York native survived the sniper fire and artillery bombardment. During the intense fighting on that day, Zicari was wounded by shrapnel. More than 77 years later, Zicari was finally presented with his Purple Heart medal. The 98-year-old Las Vegas resident received the military decoration by the U.S. Army in June 2021, but he came to city council chambers on Oct. 6 to be ceremoniously pinned at the start of the government’s biweekly meeting. Las Vegas City Council and Mayor Carolyn G. Goodman also recognized the 98-year-old Zicari by naming him the October 2021 Citizen of the Month. He was joined by friends, family, Veterans and active duty servicemembers.
The COVID-19 pandemic presented us with an unexpectedly challenging 2020, and 2021 brought much of the same. However, I am proud to say we were more than prepared to meet the challenge, and provided our Veterans with the world class healthcare they've earned.

None of this could have been done without the hard work of all our staff. Despite increasing risks and frustration facing healthcare workers across the country, in both the private and public sectors, we have worked tirelessly to ensure our healthcare systems are safe for both staff and Veterans, and that everyone has the tools they need to succeed.

To ensure we deliver the best possible care to our Veterans, we must also make sure our staff are taken care of as well. To that end, we have increased efforts to promote wellness and resilience among our employees. Their jobs are not easy, and it takes a special kind of person to be a frontline healthcare worker in these unique times. From hosting bi-weekly coping and resilience town hall meetings to ensuring facilities are adequately staffed, we're committed to taking care of our employees so they can pass that same level of care and attention to our Veterans.

We've administered COVID-19 vaccinations to more than 240,000 Veterans and more than 20,000 employees. We're proud to be on the forefront of the fight against the pandemic, and we will continue to do everything possible to keep our Veterans and staff safe and healthy.

We continue to grow. Whether it's opening new outpatient clinics, entering into new relationships with community partners, or expanding staffing, we are committed to meeting the growing needs of the Veterans we serve.

I am grateful for every member of our staff for all the hard work they've done this year, whether at the VISN level or at our hospitals and clinics. We're all in this together, and we will never stop working to get our Veterans the high-quality care they deserve. Thank you to all our Veterans and staff for all you've done, and I look forward to another banner year of growth and improvement.

John A. Brandecker, MBA, MPH
VISN 21 Network Director
In FY21, VISN 21’s Homeless Program had another busy year conducting outreach, assisting Veterans experiencing homelessness with temporary shelter, transitional and permanent housing, employment, and connecting them with VA and community health care and other benefits. Together with community partners, VISN 21 placed 3,457 Veterans in new permanent housing in FY21 and had 8,331 Veterans housed in HUD-Veterans Affairs Supportive Housing (HUD-VASH) by the end of the fiscal year.

In response to the pandemic, VISN 21 Homeless Program staff partnered with their Homeless Patient Aligned Care Teams (HPACT), Patient Aligned Care Teams (PACT) and Medical Outreach Teams to provide COVID Vaccines to homeless Veterans in the community and at the VA.

Homeless Veterans were a priority category when the vaccines first became available, so VISN Leads from Homeless, Pharmacy, Primary Care, Mental Health, Quality Management, Public Affairs, Logistics, and others worked quickly with VAHCS staff to provide guidance on providing the vaccines to the homeless community. VISN staff, along with the local VA medical centers, held weekly calls starting in January 2021 to discuss efforts, share ideas, clarify guidance and review reports and data.

By the end of the fiscal year, VISN 21 had administered one or more doses of the COVID-19 vaccine to 8,664 Homeless Veterans.

Vaccination events were held at multiple Grant & Per Diem, Health Care for Homeless Veterans (HCHV) Residential and HUD-VASH Project Based sites throughout the VISN. These included smaller programs, such as the Community Action North Bay (CAN-B) GPD Program in Fairfield, California, one of the largest, the GPD/HCHV/HUD-VASH programs at Barbers Point on Oahu, where 100 homeless Veterans received their COVID vaccine at the first of several events at this site.

In September 2021, VISN 21 had the opportunity to restart and expand the Rideshare Program for homeless Veterans. The program provides Lyft or Uber rides to unhoused Veterans who need transportation primarily for housing, employment or medical purposes, but can also be used to transport Veterans to food banks/grocery stores, court, and more.

Five of our health care systems participated in the rideshare program in FY2020 as part of the VHA Innovation Ecosystem’s VHA Innovators Network. In FY2020, VISN 21 completed 765 rides, an average of 96 rides per month, from February to September 2020.

In the first month of the expanded rideshare project in September 2021, VISN 21 facilities completed 162 rides. The majority of those were for medical and mental health appointments, with housing-related rides as the second largest number of rides.

In FY2022 through February, we have provided an average of 347 rides per month across the 7 health care systems, for a total of 1,735 rides.

Formerly homeless Veterans received COVID-19 vaccines in Kapolei, Hawaii on March 9, 2021. Dr. Adam Robinson, VA Pacific Islands Health Care System director, and Lt. Gov. Josh Green were on hand for the event, which was held at one of many areas within VISN 21 where formerly homeless Veterans are provided emergency, transitional and permanent housing.
FY2021 Highlights:

• Similar cost-avoidance to non-pandemic years while maintaining the same high quality safe and effective care
• Met all VISN priority metrics
• Achieved high vaccination rates for Veterans and employees

Outside of the focused top 10 areas, PBM has also continued supporting expansion of a national Prior Authorization Drug Request pilot providing equitable care related to the prescription drug benefit Veterans receive. In addition, our existing interdisciplinary clinical task forces continued to work on goals and had many achievements and lessons learned for the year that will continue to make us better! We want to extend our endless gratitude to all our VISN 21 colleagues and partners for their dedication to the VA mission. PBM will continue its efforts to build the health care of tomorrow while supporting Veterans’ health and wellness goals today.

VISN 21 Pharmacy Benefits Management (PBM) supports the provision of clinical care and health care operations by leveraging best practices, health analytics, stewardship, and safe and effective medication use to improve Veteran outcomes and quality of care. This year, a critical component of delivering on our PBM mission included the provision of COVID vaccines and treatments to our Veterans and employees.

In addition to committing time and resources to COVID support in fiscal year 2021 (FY21), PBM increased efforts to build interdisciplinary champion stakeholders at each facility to focus on ten key clinical and medication safety metrics. These champion groups worked together to strategically evaluate current processes and work towards creating sustainable ways to address how we can provide the best possible care and utilize our resources and health care teams in the areas of academic detailing, anticoagulation, hypoglycemia safety, substance use disorder treatment, high risk medication monitoring and safety, testosterone safety, pain initiatives, influenza immunizations, and cost stewardship initiatives. Many of the efforts started in these groups are still underway and will continue to be a focus for FY22, with progress being made towards development of sustainable solutions.

“More than metrics.”

Coined in late FY21, this phrase highlights the breadth of services and remarkable accomplishments that occur outside the metric spotlight and to celebrate our staff who made it all happen.

Top 5 Compliments:
• Quality of care
• Cleanliness of facility
• Interactions with staff
• Nutrition services
• Satisfaction with specialty care

Top 5 Concerns:
• Scheduling an appointment
• Appointment cancellation by VA
• Accuracy of mail order prescription addresses
• Language barriers
• Scheduling an appointment for specialty care

Using Veteran input to inspire changes that optimize Patient Experience at VA.
**VISN OVERVIEW**

**OPTIMIZING CARE FOR VETERANS**

- Executed a $5.66B operating budget, including $316.4M of CARES Act funding for COVID-19
- Implemented an Electrical Safety Local Emphasis program at each site within the network
- Adapted to the new OSHA standard: COVID Emergency Temporary Standard
- Awarded the lease for a 69,000-square-foot outpatient clinic in Hawaii
- Awarded a VISN-wide lease services support contract
- Implemented new pharmaceutical waste rules in California and Hawaii
- Upgraded and refreshed VISN-wide cardiology electronic medical image information systems
- Began implementation of Medicom digital community-based radiology image sharing system
- Implemented VA Police Modernization Initiative, Phase 2
- Implemented eCitation system
- Successfully awarded 5 VISN prosthetic contractors
- Sustained improvement in prosthetic consult processing timeliness to 7.3 days
- ...and much more!

More than 20 years ago, U.S. Navy Veteran and VA Palo Alto employee Brian Higgins was diagnosed with retinitis pigmentosa, a rare genetic disorder that affects roughly 1 in 4,000 people with difficulty in seeing at night and loss of peripheral vision. For the past 3 years, Higgins has been actively using his prototype of a smart white cane, which can be paired with an iPhone and features feedback tools such as sound and haptic feedback. The sensor package includes light detection and ranging, commonly known as LiDAR, as well as 2 ultrasonic sensors. He won the 2021 Innovators Network (iNET) Investee of the Year Award for his prototype, and hopes to continue inventing and innovating to improve health care experiences for Veterans like him.
The Palo Verde High School Air Force Junior ROTC program honored Veterans and employees as they brought in their demonstration team to the North Las Vegas VA Medical Center to do a flag folding ceremony in honor of Veterans Day. The team came to teach the importance of our flag, the significance of each fold of the flag, and to remember our current and fallen Veterans.

“It was a great experience to understand why our flag stands tall and is always respected.”

Roxanne Banting, Registered Nurse
VA Las Vegas

Clinic manager Daniel Gutkoski and his team in Manila worked tirelessly in FY2021 to provide high quality care for Veterans living in the Philippines. They successfully rolled out COVID-19 vaccines for more than 6,000 individuals from April to August 2021. They deployed effective mitigation strategies with the VISN Infection Control Committee to minimize COVID-19 infections and spread among staff.

They also developed and began implementing an operational strategy for the “new normal” for post-COVID operations, with an increased focus on virtual care. This will improve Veteran safety as well as access to care for Veterans within their catchment area.

U.S. Secretary of Defense Lloyd Austin visited the VA Manila Outpatient Clinic on Saturday, July 30, 2021. Austin toured the clinic and spoke to Veterans who were receiving their COVID-19 vaccines.
The Disaster Emergency Medical Personnel System (DEMPS) is the Veterans Health Administration’s main program for deployment of clinical and non-clinical staff to an emergency or disaster. In FY 2021, 80 employees from various VISN 21 locations were deployed on DEMPS missions more than 100 times. Some employees were deployed in support of multiple missions. They provided critical assistance for 23 separate missions across 14 states. Missions ranged from responses to COVID-related outbreaks, disaster relief following Hurricanes Delta and Ida, and more.

You’ve undoubtedly heard by now that becoming a High Reliability Organization is a journey – it’s a marathon and not a sprint. Although I’m not a runner, I do know that marathon runners frequently check their times during their race to make sure they are keeping pace and maintaining consistent progress. So in the spirit of checking ourselves and our progress on this journey, I wanted to share with you VISN 21’s progress towards becoming a HRO.

Although only showing data through FY21Q3, the VISN 21 HRO Dashboard graphically displays great progress. Collectively, we’ve trained nearly 20,000 VISN staff about HRO, and close to 200 staff on in-depth clinical team training. These are impressive numbers, exemplifying the desire and dedication to Continuous Process Improvement. We all want to get better and provide safer, efficient, evidence-based care for our Veterans. Also commendable are the improving FY21 Employee Engagement Index and Workgroup Psychological Safety scores from the FY21 All Employee Survey—both numbers going in the right direction. A simple graphic that also depicts progress on our journey is the Patient Safety Event Reporting graph (above right). You’ll notice that the light blue bar, representing the number of adverse events per 10k uniques, took a nice jump up in Q3 which speaks to staff feeling safe to report mishaps. As recently highlighted by Rima Ann Nelson, Assistant Under Secretary for Health for Operations for VHA, in a Change Management call, “We can’t fix or improve things if we don’t know about them or they aren’t reported.” Reporting is the first step. Perhaps even more impressive, however, is the large increase in the dark blue bar which represents close call or near miss reports. One litmus of claiming HRO status is when the number of close call reports outnumbers the actual event reports. This would mean that staff are truly occupied with failure and reporting “almost events” so they could be evaluated and fixed before a patient is harmed. Our numbers are improving, but we still have a way to go here.

In 3 of the 5 metrics, the raw number of adverse patient outcomes (in gray bars) declined in Q3, which is the preferred direction for these preventable events (perioperative pulmonary embolism/deep vein thrombosis, surgical inpatient deaths, post op sepsis cases). Remember, our ultimate goal in becoming a Highly Reliable Organization is to cause zero preventable harm.

Looking at this simple graphic (right) of our journey to zero harm, where would you say we are? If you look closely, you’ll notice the road is not simple and straight, but curvy and twisted. Running this marathon takes time and effort. With continued diligence and focus, we will get there but it’s going to take all of us to commit to a culture of safety.
VA is in the process of developing a “One VA” complex in Alameda, California. The 624 acres of property was acquired from the Department of the Navy in 2014 after the closure of Naval Air Station Alameda in 1996. When completed, it will serve an estimated 270,000 Veterans in the greater San Francisco Bay Area. Facilities on the site will include a 158,000 square foot Community Based Outpatient Clinic falling under the VA San Francisco Health Care System, a National Cemetery Columbarium that will have the potential to hold the remains of 300,000 Veterans and spouses, and a Veterans Benefits Service Center to help bring the many VA programs to the many Veterans residing in the area. The project has been authorized by Congress with the US Army Corps of Engineers overseeing construction. The property boasts a picturesque view of the City of San Francisco skyline and the Bay Bridge connecting Oakland to San Francisco. In acquiring this unique parcel of land, the VA committed to overseeing 512 acres as a conservation management area. In cooperation with the U.S. Fish and Wildlife Service, the conservation management area supports several species of birds to include one of the most important nesting sites for the California Least Tern, an endangered species.

Currently, the site is not open to the public. Once the project is complete, the National Cemetery and the Clinic will have scheduled hours of operation. In cooperation with the City of Alameda and the East Bay Regional Park District, the Bay Trail system is planned to connect to the site and extend around the perimeter of the property.

VA Palo Alto introduces K9 program

VA Palo Alto looks for unique talent when it comes to its Police Service. The range of talents within the team may rival the best police departments in the country, but their newest recruit, Atlas, brings a whole new level of skill. Not only is he fully trained to track down lost patients and help with any drug-related cases, but he can do it all with his nose. That is because Atlas is a European Labrador Retriever that was recently acquired to join VA Palo Alto Police Service.

“The addition of our VA Police K9 team and the unique skills they offer further exemplifies our unwavering commitment to provide the safest and most secure environment for our Veterans, visitors, and fellow employees,” said VA Palo Alto Police Chief and U.S. Marine Corps Veteran Martin Sizemore.

When Sizemore joined VA Palo Alto, one of his first initiatives was to implement a K9 program. With the support of executive leadership, Chief Sizemore’s team was able to establish a contract with a kennel in western Pennsylvania that sought out the perfect dog.

The kennel sources all their dogs from Europe, so as soon as the contract was set up, the kennel owner flew over to Holland to find a sporting breed that matched the VA’s criteria for police dogs.

Christian Mattei, a Lieutenant Detective and Air Force Veteran, is the K9 handler for Atlas. He has more than 11 years of service with VA Palo Alto Police, and after making his way to lieutenant with a solid track record, he was the obvious choice to become the first K9 handler in the health care system. He also grew up training hunting dogs but was able to establish a contract with a kennel in western Pennsylvania that sought out the perfect dog.

The kennel sources all their dogs from Europe, so as soon as the contract was set up, the kennel owner flew over to Holland to find a sporting breed that matched the VA’s criteria for police dogs.

“Atlas’ main purpose for his unit is to serve as a tracker. He can sniff out drugs on top of being able to track humans when necessary. While drugs aren’t a frequent issue, he is based at the VA Menlo Park campus. The campus is home to several nursing facilities dedicated to elderly patients, some suffering from dementia or Alzheimer’s Disease. The value of having an officer like Atlas is high when it comes to these populations.”

Atlas even adds value to VA Palo Alto’s strong relationships with community law enforcement and can be an asset for cases like missing people. However, aside from tracking skills, certain dogs can make police officers more approachable. When looking at Atlas’ puppy face, that statement is undeniable!

VA Pacific Islands opens new Windward Clinic

VA Pacific Islands Health Care System announced the new Windward VA Community-Based Outpatient Clinic (CBOC), located in the Castle Medical Office Building in Kaneohe.

“We are proud to be expanding the much-needed services to our veterans,” said Dr. Adam Robinson, medical center director. “This new Windward VA Clinic will increase access to VA’s advanced technology, top providers and staff who will bring safe, compassionate, quality care to them. We appreciate all of the support from our community partners who have helped to make this a reality. Our Windward Oahu veterans will now have a new facility that will improve their access to health care closer to home.”

The clinic will serve enrolled veterans living along the Windward Coast from Kahuku to Waimanalo. Veterans who presently receive care at VA’s Ambulatory Care Clinic located at Tripler Medical Center will have the option and are being invited to use the Windward CBOC as their new medical home. This will minimize visits to Tripler, except for specific services only available there.

The clinic will offer primary care, mental health, women’s health, specialty care, home-based primary care, laboratory, telehealth and audiology.

Care packages for caregivers

In July 2021, the local Guitars 4 Vets program was successfully re-established at the Reno Elks Lodge #697 by VA Sierra Nevada Recreation Therapy staff and volunteers. The program offers many benefits for Veterans, including increased skill building, healthy coping strategies and opportunities for positive social interactions, emphasizing the value of community integration.
Above: VA Central California partnered with the Fresno Vet Center in honor of Vietnam War Era Veterans, hosting a drive-through ceremony Monday, March 29, 2021. The opening ceremony featured guest speakers including Fresno Vet Center Director Herman Barretto and VA Central California Director Charles Benninger. Volunteers distributed commemorative bags, lapel pins and Presidential Proclamation letters as Veterans drove through. Other volunteers held signs welcoming the Veterans home, while an all-Veteran band played live music from the 1960s and 1970s.

Below: Ian Cavallo, a Floor Care Specialist in VA Environmental Management Services at VA Sierra Nevada, was the first national recipient in the VA western region to receive the HeRO Award for demonstrating outstanding commitment to High Reliability Organization principles.

Veterans receive dose of hope

Before going to bed on Jan. 29, 2021, U.S. Air Force Veteran Ann Elizabeth Martin-Stubbs prayed for an answer. She was unsure about receiving a COVID-19 vaccine and worried that not enough research had been done on the shots. When she awoke the next day, she went to the Sacramento VA Medical Center and received her first dose of the vaccine.

Martin-Stubbs was one of the 175 Veterans and caregivers who received their first dose of the COVID-19 vaccine at the medical center’s first mass vaccination clinic Jan. 30, 2021. As an African American Veteran and caregiver for her 92-year-old Veteran father, Martin-Stubbs was skeptical about receiving a vaccine because of experiments like the Tuskegee study. “Even though we have our doubts as a race about being guinea pigs, I’m glad I did it,” she said. “I was expecting to get a vaccine sometime in the summer. I now feel relieved and more confident about getting on an airplane. This was a wonderful experience.”

Martin-Stubbs wasn’t the only Veteran who felt some relief at the event. “It’s good to know I’ve been inoculated against the virus,” said Maximo Nisperos (pictured, above right), U.S. Army Veteran. “I was happy I could get the vaccine so soon. If you’re older or have underlying health conditions, get the shot.”

Katie Lansing, a medical support assistant at San Francisco VA’s Eureka Clinic, set up a free pantry in the clinic’s physical therapy room to benefit local Veterans struggling with food insecurity. She collaborated with a local non-profit food bank to open the pantry in February 2021, inspired by stories she heard from Veterans in need.

VA Palo Alto hosts mobility tour and innovation fair

On July 19, 2021, VA Palo Alto held their first in-person event since the start of the pandemic, participating in the Operation Mobility Tour. The Spinal Cord Injury/Disorders (SCI/D) Center received a new iBOT® Personal Mobility Device as part of a national donation of 25 devices to VA SCI/D Centers around the country. This unique personal mobility device allows Veterans with spinal cord injuries to move over various terrains and even climb stairs. The iBOT PMD donation is the first engagement coming out of the VA New England Center for Innovation Excellence (NECIE), benefiting Veterans by providing life enhancing technology solutions for those who are experiencing chronic and/or complex illness and injury. The event also featured an Innovation Fair, where attendees could see the latest innovations in healthcare.

As of October 1, 2021, operational control of the the Oakland VA Clinic was transferred from VA Northern California to VA San Francisco. This change was implemented to better serve Veterans in the area. The Oakland clinic is now approximately 75 miles closer to its parent facility.
VA Reno celebrates LGBTQ+ Veterans

San Francisco VA Health Care System broke ground in 2020 on a new clinic in Santa Rosa. The clinic will expand services to Sonoma County Veteran patients. The facility is scheduled to open in the summer of 2022. The new clinic will employ 200 clinical and administrative staff and offer primary and specialty care services, mental health, women Veteran health services, telehealth and telemedicine, dental, laboratory, occupational and physical therapy, prosthetics, pharmacy, radiology, and will also include space for clinical and administrative support staff such as information technology, logistics, scheduling clerks and housekeeping services.

VA Las Vegas holds patient experience summit

VA Southern Nevada commemorated Patient Experience Week by holding their inaugural Patient Experience Summit at the North Las Vegas VA Medical Center April 29, 2021. Co-hosted by the Veterans Experience Service and Public Affairs, the full-day event brought the health care system’s new Patient Experience Committee, which consists of clinical and administrative leaders and frontline staff, together to focus on improvement in several areas. “Our motto is ‘Here Every Day is Veterans Day’,” said Medical Center Director William locomotive (Strategic Analytics for Improvement and Learning). “We conducted this first-ever Summit because of the importance of including the human experience in delivering quality and high-value health care.”

Caron opened the summit by highlighting YASHH’s Veterans Experience Service staff and presenting each member with a patient experience superstar pin for their efforts in providing service recovery on the frontlines. “We do great work, but oftentimes we get an individual who is upset and frustrated with the system,” he said. “When this happens, our VES staff have to deescalate and try to find a way to yes for those Veterans if feasible. They also review our patient survey data and work closely with services to make sure we’re providing the best experience possible.”

In addition to VES staff, Caron explained that every employee, volunteer and Red Coat Ambassador is part of the patient experience. “Our satisfaction surveys are based on Veterans’ perceptions of their interactions with the health care system, and much of that comes from how we make them feel,” he said. “For example, were we welcoming? Did we listen and show empathy? And were their needs addressed?”

To illustrate and learn more about the patient experience from the Veterans perspective, attendees participated in Own the Moment training. Then, they were provided an overview on the Survey of Healthcare Experiences of Patients (SHEP) as well as V-Signals and discussed how data can be used to improve the patient experience. “We recently conducted a facility self-assessment, and discovered that using survey results to enhance the patient experience was our lowest scoring area out of six domains assessed,” said Charles “Chuck” Flamey, VA Southern Nevada Chief of Public Affairs and Acting Chief of Veterans Experience. “Our aspirational goal is to improve every SHEP measure tracked in SAIL (Strategic Analytics for Improvement and Learning) by one quintile. And, to do so, we need champions who are able to understand, interpret and communicate the data.”

Below: The VHA National Community Partnership challenge is an annual award recognizing outstanding partnerships that help Veterans and their communities. VA Palo Alto won this year for its medical-legal partnership with Bay Area Legal Aid. VA social workers identified Veterans with civil legal problems during wellbeing assessments and their communities. VA Palo Alto with 2020 Eisenberg Awards, (left) and Dr. David Gaba of VA Palo Alto (right) were recognized Dr. Elizabeth Oliva of the Joint Commission for Equality.”

Below: Three VISN 21 health care systems (Northern California, Palo Alto and San Francisco) collaborated to create an ad campaign to raise awareness of VA’s Women Veteran services and programs. The ad was displayed at the San Francisco International Airport. The campaign showcases local women Veterans, directs viewers to the VHA Women’s Health website, and provides access to the Women Veteran Call Center’s number, offering assistance to women Veterans everywhere. The goal is to educate women Veterans about the benefits and services they’ve earned. Scan the QR code to learn more.
VA Reno honors women Veterans with “Through Our Eyes” display

Through Our Eyes – The Women Veterans Experience exhibit is an innovative project created at VA Sierra Nevada and available to the public online. The exhibit features portraits of women Veterans along with their My Life, My Story articles, which recount each Veteran’s life in her own words. Readers can immerse themselves into the lives of brave women of different ages and branches of military service.

A large team of staff and volunteers worked tirelessly to find participants, gather their stories, take portraits and produce the final products. The exhibit aims to ensure women Veterans are recognized for their heroic contributions. Many women who answered the nation’s call do not feel they receive the same appreciation as their male counterparts. Some, especially those who served in World War II or the Korean War, don’t always realize or consider themselves Veterans.

The traveling photo exhibit has been seen by past VA secretaries, national commanders of Disabled American Veterans, Nevada legislators and hundreds of Nevadans. Making it available online was in response to travel and gathering restrictions put in place because of the COVID-19 pandemic.

25-year-old Air Force Veteran, Genesee, and 92-year-old WWII Naval Medic, Carole, (pictured above) discovered a deep connection during their Through Our Eyes photo shoot. They are very close friends still today.

VA Las Vegas nurse receives award for excellence

A VA Southern Nevada nurse won the Secretary’s Award for Excellence in Nursing and Advancement of Nursing Programs for helping to improve health care services for Veterans. Emergency Department Nurse Maria VanHart was one of six selected to receive the 2021 award, announced by VA Secretary Denis McDonough.

VanHart was recognized for demonstrating leadership, selfless dedication to Veterans, and providing patient-centered care in a safe, efficient, and cost-effective manner. “Over the past year, our incredible professionals have answered the call to serve,” said McDonough. “Our teammates, who have displayed superior performance throughout this challenging pandemic, not only cared for Veterans enrolled in our system, but stepped up to support VA’s Fourth Mission efforts to care for civilian patients in communities across the nation. In the face of uncertainty, they cared for our most vulnerable and saved lives.”

VA established the award in 1984 as a way to honor nurses and executives across its health care system.

“In line with VA’s vision of quality care and service, Maria VanHart works tirelessly as a Registered Nurse in our Emergency Department to ensure our patients in communities across the country. In the face of uncertainty, she has performed with selfless dedication during this pandemic.” VanHart was also recognized in June for providing life-saving care upon us for care have the very best experience,” said William Caron, VA Southern Nevada director. “We are so proud of her and of all our nurses who have performed with selfless dedication during this pandemic.”

 emergency personnel noted that her triage, trauma care, and calling for helicopter medivac likely saved the lives of several of the critically injured.

Families and friends, the American Legion Riders, and community partners cheered and celebrated the Veteran residents at the Community Living Center (CLC), which is located at the Martinez VA Outpatient Clinic, with a special Parade of Families for Veterans Day 2020. Families and loved ones were able to drive by the facility and safely wave at their Veteran loved ones. To ensure the health and safety of Veterans and VA employees during the pandemic, the CLC had been unable to allow visitors, so this was an emotional event filled with smiles, honks of joy and lots of love for those who served our country.

Thirty Veterans and their caretakers at the Department of Veterans Affairs’ Community Living Center in Martinez, California, were among the 600,000 who came seeking necessary medical care in the middle of the pandemic.
